A.0 • OVERVIEW

The Create The Edge Standard

Create The Edge Associates has operated since [YEAR FOUNDED] with a single governing principle: proposal quality is the ultimate protection. Not a value statement, not an aspiration. A mechanism.

Proposal quality is the ultimate protection. It protects the client by defining exact scope so operations run without surprise. It protects the firm by pricing risk correctly and earning fair margins. It protects the project by creating the blueprint the operations team relies on from day one of construction through years of service.

This training manual is the mechanism that transmits this standard. Not the spirit of it, but the precise, reproducible method. Every module teaches one part of the discipline that produces a **Create The Edge**-quality proposal: the vocabulary, the psychology, the procurement intelligence, the fee arithmetic, the code knowledge, the file discipline. Together they describe what it means to work at the highest level of commercial design consulting.

The standard is not aspirational. It is operational. It exists in every proposal that leaves this firm, in every conversation a consultant has with a client, and in every decision about scope, fee, and delivery. You are reading this because you have joined a firm that holds itself to this standard, and you are expected to hold yourself to it as well.

” **EXPERT INSIGHT**

"The proposal is not a formality. It is the document that defines what the client buys, what the firm delivers, and what the project is allowed to become. Every word in it is a decision, and every vague word is a decision that someone else will make later, usually under pressure, and usually at the firm's expense."

· Marketing Director

FIGURE A.0.1 • WHAT PROPOSAL QUALITY PROTECTS

1

PROTECTS

The Client

Exact scope means operations run without surprise. The client gets what was designed, not a compromise forced by ambiguity.

2

PROTECTS

The Firm

Risk is priced correctly and margins are earned. Vague scope creates scope creep, which costs the firm hours it cannot bill.

3

PROTECTS

The Project

The proposal is the blueprint the operations team uses. A precise proposal runs the project. An imprecise one requires constant interpretation.

4

PROTECTS

The Relationship

A proposal that performs exactly as written creates trust. The client whose project delivers as scoped calls back with the next one.

Every proposal that leaves **Create The Edge** is reviewed before it goes. Not because consultants make mistakes, but because a second set of expert eyes is the mechanism that keeps the standard consistent. The review step is not optional and does not come after the deadline.

MODULE A · FOUNDATIONS

A.1 · THE FIRM

The Firm: About Your Company

Create The Edge Associates, Inc. has operated at the intersection of commercial design, operations, and regulatory compliance since [YEAR FOUNDED]. The firm's longevity is not accidental; it is the product of institutional precision applied consistently across [X]+ years of engagements.

Create The Edge Associates, Inc. is headquartered at 3103 [Company Street] Road in [City, State]. The firm has spent [X] years building the knowledge base, the client relationships, and the methodological precision that define its reputation in commercial foodservice and laundry design consulting.

The firm operates in two primary disciplines: commercial foodservice design and commercial laundry design. Foodservice engagements range from a single restaurant in a boutique hotel to a multi-outlet food and beverage program across a resort campus. Laundry engagements cover everything from a hospital linen room to a high-volume commercial laundry serving a network of properties. The common thread is complexity: these are environments where the difference between a correctly engineered space and an incorrectly engineered one is measured in years of operational problems and wasted capital.

Create The Edge's clients include independent restaurant operators, hospitality management companies, healthcare systems, universities, and private clubs across the southeastern US and beyond. What they share is that they have come to **Create The Edge** because they want the problem solved correctly, not approximately.

ATTRIBUTE	DETAIL
Founded	[YEAR FOUNDED] — Add your founding year
Headquarters	[Company Address]
Primary Disciplines	Commercial Foodservice Design · Commercial Laundry Design
Client Sectors	Hospitality, Healthcare, Higher Education, Private Clubs, Food & Beverage
Geographic Reach	Southeastern US and national engagements
Operating Standard	Three-business-day proposal turnaround · Pre-flight review on every proposal

≡ FROM THE FILES

The firm's client relationships are multi-decade in many cases. A property that hired **Create The Edge** for its original kitchen design returns for every renovation, expansion, and replacement cycle. Long-term relationships are built on one thing: the firm delivered exactly what it proposed, on scope and on fee.

✓ BEST PRACTICE

Know the firm's history well enough to explain it in a two-minute client conversation. Clients who understand they are hiring a firm with more than sixty years of specialized experience in their specific environment type trust the fee and the scope before the proposal is even read.

A.2 · THE CONSULTANT'S ROLE

The Consultant's Role

*The title is "consultant," but the function is closer to "trusted expert who walks the client from a problem to a solved space." A **Create The Edge** consultant owns the client relationship from first contact through project delivery.*

At **Create The Edge**, the consultant is not a support function. The consultant is the primary point of contact, the subject-matter expert in the room, and the person whose name is on the proposal. This is not a role defined by junior hours and senior signatures; it is defined by accountability. The proposal is yours. The scope is yours. The fee defense is yours.

The day-to-day work spans the full arc of an engagement:

- Receiving, reading, and analyzing RFPs and RFQs from clients or procurement offices
- Client discovery meetings: the forensic process of learning what the client actually needs, covered in detail in Section E
- Proposal writing, fee calculation, and scope definition using the methods in Sections G and H
- Code and compliance review to ensure the proposed design is permissible and inspectable (Section I)
- Coordination with architects, general contractors, and equipment vendors through delivery
- Post-award project management through construction administration

The breadth of this role is what commands the fee. A client who can get a kitchen layout from a restaurant supply company is not looking for a **Create The Edge** consultant. The clients who call **Create The Edge** need someone who can read the operational intent, identify the regulatory constraints, calculate the correct fee for the correct scope, and deliver a design that runs the way the proposal said it would.

” EXPERT INSIGHT

"The consultant who walks in and says 'tell me what you need' is already behind. The consultant who walks in and says 'based on your project type and scale, here is what you are going to need, and here is what it will cost to get it right' is the one the client trusts with the next project."

· Marketing Director

■ RULE OF THE HOUSE

The consultant does not wait for the client to define the scope. The consultant's expertise exists precisely to define it correctly when the client cannot. A scope defined by the client without expert guidance is a scope that will need to be revised, and revisions after the proposal is signed are costly for everyone.

MODULE A · INDUSTRY CONTEXT

A.3 · THE DESIGN LANDSCAPE

The Commercial Design Landscape

Commercial foodservice and laundry design sits at the intersection of architecture, operations, engineering, and regulatory compliance. It is not a field where talented generalists improvise. The clients pay for specialized expertise that no generalist can replicate.

Commercial Foodservice Design

Commercial foodservice design encompasses the programming, layout, specification, and coordination of professional food preparation environments. Restaurants, hotel kitchens, employee cafeterias, hospital dietary departments, university dining halls, private club kitchens, catering operations: each has its own operational logic, code requirements, and equipment matrix.

A consultant who cannot read the operational intent behind a client brief cannot design for it. A hotel with 400 rooms and three food and beverage outlets has different throughput, staffing, and equipment requirements than a 100-seat independent restaurant. The design has to be built around the operation, not the other way around.

Commercial Laundry Design

Commercial laundry design covers the specification and layout of industrial-scale linen and textile processing facilities. Hospitals require on-premises laundry to meet infection control standards. Hotels generate volumes that demand engineered throughput systems. Country clubs and universities run specialized programs with specific fabric requirements and soil types.

The laundry consultant must understand capacity calculation, utility requirements including water, steam, gas, and electrical load, equipment selection, and layout for processing efficiency. A laundry specification that underestimates throughput will create a facility that cannot keep up with linen demand from the first week of operation.

The Regulatory Backbone

Both disciplines share a common regulatory framework that shapes every design decision before a single piece of equipment is specified. NSF International standards govern food equipment and material specifications. NFPA codes govern fire suppression, exhaust, and gas systems. Local health department codes, which vary by jurisdiction, govern sanitation, finish materials, and operational layouts. ADA compliance requirements apply to any public-facing commercial food service space. Understanding this regulatory environment is not optional; it is the expertise that the fee pays for.

CRITICAL KNOWLEDGE GAP

A consultant who does not know the applicable code for a project cannot write a correct scope. A scope written without code knowledge produces a design that may not be permitted, which means a redesign after the proposal is signed, which is the most expensive mistake a consultant can make.

MODULE A · INDUSTRY CONTEXT

A.4 · HOW DEALS WORK

The Anatomy of a Won Deal

A deal does not begin with a proposal. It begins with a relationship, a need, and a conversation. Understanding the arc from first contact to signed contract is what allows a consultant to operate intentionally rather than reactively.

The pipeline from first contact to executed contract is not linear, but it is predictable. Each stage has a defined purpose and a set of deliverables. A consultant who does not understand the full arc cannot manage their position within it.

1 Lead or Invitation

A potential engagement arrives as a direct call from a client or referral source, or as a formal procurement document (RFP or RFQ). The consultant's first task is to assess fit: does this project align with Create The Edge's capabilities, and is the client a realistic decision-maker? Discovery begins at first contact, not at the formal discovery meeting.

2 Discovery

The forensic process of learning what the client actually needs, distinct from what they say they need. A discovery meeting is not a listening exercise; it is an expert interrogation. The consultant asks the questions that reveal operational constraints, regulatory exposures, and budget realities the client may not have considered. The full method is in Section E.

3 Proposal Construction

Fee is calculated, scope is defined, and the proposal is written. Sections F, G, H, and K all converge here: the procurement intelligence shapes the response format, the fee method determines the number, the writing standard governs the document, and the filing discipline governs what happens to the file. The proposal that leaves the firm is always reviewed before it goes.

4 Review and Delivery

Every proposal at Create The Edge is reviewed before it goes out. The three-business-day standard runs from RFP receipt to delivery. The proposal arrives on time, with correct scope and defensible fees. Arriving on time with a well-crafted proposal is itself a signal to the client about how the project will be managed.

5 Follow-Through

The proposal goes out, questions are answered, and the decision is made. Win or lose, the follow-through is professional and the file is correct. The won deal moves into project delivery with the signed contract filed. The lost deal stays in the precedent library to become the template for the next similar engagement.

✓ BEST PRACTICE

Win or lose, file the proposal correctly and note what the client's decision was. The firm's precedent library is built from both outcomes. A lost proposal with correct scope and fee math is valuable next time a similar project arrives. A won proposal filed incorrectly cannot be found when the project comes back for a renovation in five years.

MODULE A · EXCELLENCE

A.5 · THE PROFESSIONAL IDENTITY

The Professional Identity

Elite commercial design consultants share a set of operating disciplines that distinguish them from practitioners who are technically competent but not yet excellent. These are not personality traits; they are learned and practiced.

Technical competence is the minimum requirement for a **Create The Edge** consultant. The firm's reputation, and the consultant's fee justification, require more than competence. They require the operating disciplines that make competence visible to the client at every interaction.

Precision Over Speed, Always

The three-day turnaround is the standard because it is achievable at the highest quality level. A rushed proposal that ships in one day at lower quality is not an asset; it is a liability. The client who receives a proposal with errors may not say anything at the time, but they remember when the next engagement is being awarded.

The Proposal Is a Legal Document

A **Create The Edge** proposal defines what will be delivered, at what fee, under what scope. It is not a guess or an estimate. Vague proposals create disputes because they leave the definition of "what was promised" open to interpretation. Precise proposals protect everyone: the client, the firm, and the project.

Expertise Commands the Room

A **Create The Edge** consultant who walks into a client meeting must be the most knowledgeable person in the room on the subjects of commercial kitchen design, laundry design, code compliance, and fee engineering. This is not arrogance; it is the credential that justifies the fee. The client is not hiring a vendor; they are hiring an expert.

Silence Is a Signal

When a client asks a question the consultant does not know the answer to, the correct response is to say so and commit to a response time. The consultant who guesses and gets it wrong loses the relationship. The consultant who admits the knowledge gap and fills it correctly gains one of the most durable forms of client trust: the confidence that comes from demonstrated intellectual honesty.

” EXPERT INSIGHT

"The consultant who cannot say 'I don't know, but I will find out and have it to you by Thursday' will eventually say something wrong with confidence, and that is the moment the relationship ends. The willingness to know the limit of your knowledge is itself a form of expertise."

· Marketing Director

MODULE A · EXCELLENCE

A.6 · CORE SERVICE LINES

Core Service Lines in Detail

Understanding the two core service lines in depth is foundational before engaging with any client. The wrong framing of a project leads to an incorrect scope, and an incorrect scope creates problems that outlast the proposal.

Foodservice Design: The Five-Phase Framework

A foodservice design engagement typically moves through five phases. The programming phase is where **Create The Edge** learns the operational intent: cuisine type, covers per hour, service style, regulatory environment, and equipment preferences. Everything after programming is translation of that operational intent into engineered space.

FIGURE A.6.1 • THE FIVE PHASES OF A FOODSERVICE DESIGN ENGAGEMENT

PHASE	WHAT HAPPENS	KEY DELIVERABLE
1. Programming	Operational intent is documented: menu, throughput, service style, code environment	Project program
2. Schematic Design	Conceptual layouts and equipment categories are developed and presented to the client	Schematic drawings
3. Design Development	Layouts are refined, equipment is specified, utility requirements are defined	Design development drawings
4. Construction Documentation	Permit-ready drawings and specifications are produced for the GC and sub-contractors	Construction documents
5. Construction Administration	Shop drawings reviewed, site visits made, punch list completed, operation confirmed	Project closeout

Laundry Design: The Throughput Imperative

Laundry design moves through similar phases, with a heavier emphasis on capacity calculation and utility engineering at the outset. The first question in every laundry engagement is throughput: how many pounds of linen per day, in what categories (food and beverage, terry, bath, specialty), with what turnaround time requirement.

From throughput, all downstream decisions follow: the equipment matrix, utility loads (water, steam, gas, electrical), floor area required, and the staffing model. A laundry design that does not begin with throughput is designed backward, and the consequences appear the first week of full operation when the facility cannot keep pace with linen demand.

RULE OF THE HOUSE

Never propose a laundry design without completing a throughput calculation first. A facility sized for 4,000 pounds per day that operates at 6,000 pounds per day is a client crisis in the making, and the proposal that did not calculate throughput correctly is the document that proves the consultant did not do the analysis.

A.7 · THE THREE-DAY STANDARD

The Three-Day Standard

Create The Edge's most operationally defining commitment is the three-business-day turnaround from RFP receipt to a completed proposal in the client's inbox. This is not a stretch goal; it is the standard.

The three-day standard is achievable because the systems in this training manual are in place: the fee calculation methodology is mastered (Section H), the proposal template is precise (Section G), the file discipline is practiced (Section K), and the vocabulary of the field is fluent (Section B). When every part of the method is internalized, three days is enough time to produce a proposal that would take a less-prepared competitor two weeks.

The three-day standard is also a competitive weapon. Most competitors take longer. A client who receives a well-crafted, professionally formatted **Create The Edge** proposal in three days, against competitors who take ten, has already formed an opinion about which firm is organized and capable, before a single fee number is evaluated.

1

DAY ONE

Analysis and Programming

Read the RFP or RFQ in full. Identify the client type, project scope, service environment, and any code or regulatory signals in the document. Build the project program.

2

DAY TWO

Fee and Draft

Calculate the fee using the five-phase labor model (Section H). Write the proposal using the Create The Edge template (Section G). File every version correctly in the project folder (Section K).

3

DAY THREE

Review and Delivery

The proposal is reviewed before it goes. The review step is non-negotiable and is completed within Day Three, not after it. The proposal arrives in the client's inbox by end of business.

4

ALWAYS

File As You Go

The project folder is named and the file is saved at creation. The sent version is preserved when it goes out. Filing is part of the cadence, not a cleanup step after the deadline.

✓ BEST PRACTICE

When an RFP arrives, immediately create the project folder in the shared system using the Year-Month-XX naming convention and save a working file. The three-day clock starts at receipt, and Day One is consumed faster than expected if the first hour is spent deciding where to save the document.

Your First 90 Days

The orientation period is the time to build the foundation. Every module of this training manual teaches one piece of the discipline. The first 90 days is the period in which those pieces are practiced

until they are fluent.

The goal of the first 90 days is not mastery in every area. It is fluency in the method and confidence in the vocabulary. A new consultant who cannot yet calculate a fee independently but who knows the five phases, understands the procurement document landscape, and can conduct a competent discovery meeting is on the right trajectory. Mastery follows fluency; fluency does not follow mastery.

FIGURE A.8.1 • THE 90-DAY ORIENTATION ROADMAP

Weeks 1 and 2: Foundations

- Study Section A (this module) and Section B. Understand the firm, the role, and the vocabulary of the field.
- Read the full glossary in Section L once as orientation. Return to it when a term is encountered in a client context.
- Attend at least one client meeting as an observer. Note vocabulary, the discovery method, and how scope is discussed.

Weeks 3 and 4: Sales and Client Psychology

- Study Section C (Sales and Marketing) and Section D (Client Psychology).
- Begin participation in discovery calls. Observe how questions are sequenced and how the consultant controls the diagnostic frame.
- Study the RFP and RFQ formats in Section F before reading any live procurement documents the firm receives.

Weeks 5 and 6: Discovery and Procurement

- Study Section E (Information Gathering and Discovery) in detail. Master the discovery framework before leading a meeting.
- Lead one discovery meeting with supervisor present. Debrief the meeting against the discovery framework in Section E.
- Review one active or recent RFP using the Section F procurement intelligence framework.

Weeks 7 and 8: Proposal and Fee Engineering

- ☐ Study Section G (Proposal Writing Mastery) and Section H (Fee Calculation and Pricing).

-
- ☐ Build one complete proposal from scratch using the Section G template. Calculate the fee independently using the Section H method. Have both reviewed.

-
- ☐ File the practice proposal in the shared system using the Section K naming convention.

Weeks 9 and 10: Code, Compliance, and Strategy

- ☐ Study Section I (Code, Compliance, and Health Department) and Section J (Meeting Evaluation and SWOT).

-
- ☐ Identify the code and regulatory requirements for one project type the firm currently has in its pipeline.

-
- ☐ Participate in one SWOT-structured evaluation meeting for a live or upcoming proposal.

Weeks 11 and 12: Systems and Reference

- ☐ Study Section K (File Naming, Organization, and Systems), Section N (Calculation Tools), and Section M (Reference Section).

-
- ☐ Use the Section N calculators on one past or current project. Verify the output against the filed proposal.

-
- ☐ By the end of Week 12, be able to run a complete proposal cycle from RFP receipt to delivery, with supervisor review.

Day 90 Checkpoint

- ☐ Sit down with your supervisor and review one complete proposal from the past 30 days against the Section G checklist.

-
- ☐ Identify one area where the proposal would have been stronger if you had applied the training manual method more rigorously.

-
- ☐ Commit to a specific practice schedule for the area identified.

” EXPERT INSIGHT

"The first 90 days is not the time to be brilliant. It is the time to be methodical. The consultant who spends the first 90 days mastering the method, even imperfectly, has a foundation the consultant who tried to improvise from week one will spend the next three years trying to build."

· Marketing Director

MODULE A · ASSESSMENT

✓ COMPREHENSIVE TEST

Twelve Questions on Role, Firm, and the Create The Edge Standard

Twelve questions across all nine sub-modules. Each has one correct answer. Work through them in one sitting, mark your answers, then check against the answer legend. A passing score is ten correct. Below eight, re-read the sub-modules referenced in the legend.

1

Which of the following best describes the founding principle of **Your Company**?

- ☐ A Lowest price wins the project
- ☐ B Proposal quality is the ultimate protection for client, firm, and project
- ☐ C Speed of delivery is the primary competitive advantage
- ☐ D Client relationships matter more than proposal precision

2

Create The Edge's standard turnaround from RFP receipt to proposal delivery is:

- ☐ A Same business day
- ☐ B Three business days
- ☐ C Five business days
- ☐ D One week

3

Create The Edge's two primary disciplines are:

- ☐ A Architecture and engineering
- ☐ B Residential design and hospitality consulting
- ☐ C Commercial foodservice design and commercial laundry design
- ☐ D Code compliance and project management

4

Proposal quality is described as "the ultimate protection" because it:

- ☐ A Guarantees the client will sign
- ☐ B Protects the client, the firm, and the project simultaneously
- ☐ C Reduces the fee needed to win the work
- ☐ D Eliminates the need for a legal contract

5

The first step in the anatomy of a won deal is:

- ☐ A Proposal construction
- ☐ B Discovery
- ☐ C Lead or invitation
- ☐ D Review and delivery

6

In a laundry design engagement, the foundational first question is always:

- ☐ A The total equipment budget
- ☐ B The preferred vendor list
- ☐ C Throughput: pounds of linen per day by category
- ☐ D The color palette and finish materials

7

Create The Edge's headquarters is located in:

- ☐ A [City A, State A]
- ☐ B [Company HQ City, State]
- ☐ C [City B, State B]
- ☐ D [City C, State C]

8

The three-day standard is a competitive advantage because:

- ☐ A It reduces the fee by cutting work hours
- ☐ B It is required by most RFPs
- ☐ C Most competitors take longer, so Create The Edge signals organizational capability before the fee is even evaluated
- ☐ D It allows more revisions before delivery

9

When a client asks a question the consultant cannot answer, the correct response is:

- ☐ A Guess and move on
- ☐ B Deflect to a different topic
- ☐ C Admit the knowledge gap and commit to a specific response time
- ☐ D Ask the client what they think the answer is

10

The five phases of a foodservice design engagement are:

- A** Bid, design, review, approve, deliver
- B** Discover, scope, price, propose, close
- C** Programming, Schematic Design, Design Development, Construction Documentation, Construction Administration
- D** Interview, draft, review, send, invoice

11

At the 90-day checkpoint, a new consultant should be able to:

- A** Lead all client engagements without supervision
- B** Design a complete commercial kitchen independently
- C** Run a complete proposal cycle with supervisor review
- D** Manage construction administration on a live project

12

The regulatory frameworks that shape commercial design decisions include:

- A** NSF, NFPA, local health department codes, and ADA requirements
- B** OSHA, EPA, FDA, and USDA only
- C** Only the local building code
- D** No external codes; design standards are set by the firm

Answers and Explanations · Questions 1 through 6

The correct answer is given for each question, followed by the reasoning and a cross-reference to the sub-module where the concept was taught. If an explanation surprises you, return to the source sub-module and re-read with the answer in hand.

QUESTION 1

Correct: B · Proposal quality is the ultimate protection

This is the foundational principle of any elite professional services firm. Precision in scope protects the client, the firm, and the project simultaneously. See A.0.

QUESTION 2

Correct: B · Three business days

The three-business-day standard runs from RFP receipt to a completed proposal in the client's inbox. It is achievable because the method is internalized, not because corners are cut. See A.7.

QUESTION 3

Correct: C · Commercial foodservice design and commercial laundry design

Create The Edge operates in two primary disciplines. Both sit at the intersection of architecture, operations, engineering, and regulatory compliance. See A.1 and A.6.

QUESTION 4

Correct: B · Protects the client, the firm, and the project simultaneously

Proposal quality protects the client (exact scope prevents operational surprises), the firm (correct risk pricing), and the project (a blueprint the operations team can rely on). See A.0.

QUESTION 5

Correct: C · Lead or invitation

A deal begins with either a direct call or a formal procurement document. Discovery begins at first contact, not at the formal discovery meeting. The consultant's first task is to assess fit. See A.4.

QUESTION 6

Correct: C · Throughput: pounds of linen per day by category

All downstream decisions in a laundry engagement, including equipment matrix, utility loads, and floor area, follow from throughput. A laundry designed without a throughput calculation is designed backward. See A.6.

The remaining answers, with reasoning and sub-module cross-references. Review every question you missed against its source sub-module before moving on to the flashcards.

QUESTION 7

Correct: B · [City, State]

Create The Edge is headquartered at [Company Address] [ZIP]. State abbreviations (GA, not Georgia) are used throughout Create The Edge documents. See A.1.

QUESTION 8

Correct: C · Most competitors take longer, so Create The Edge signals organizational capability before the fee is even evaluated

A client who receives a well-crafted Create The Edge proposal in three days, when competitors take ten, forms an opinion about firm capability before the numbers are compared. See A.7.

QUESTION 9

Correct: C · Admit the knowledge gap and commit to a specific response time

Intellectual honesty is one of the most durable forms of client trust. A consultant who guesses incorrectly loses the relationship. One who fills the gap correctly, on time, gains it. See A.5.

QUESTION 10

Correct: C · Programming, Schematic Design, Design Development, Construction Documentation, Construction Administration

These five phases are the standard arc of a foodservice design engagement. The fee calculation method in Section H is structured around this same five-phase framework. See A.6.

QUESTION 11

Correct: C · Run a complete proposal cycle with supervisor review

By Day 90, the goal is fluency in the method, not independent mastery. The consultant who can run a complete cycle, with review, is on the right trajectory. Mastery follows fluency. See A.8.

QUESTION 12

Correct: A · NSF, NFPA, local health department codes, and ADA requirements

These four regulatory frameworks shape every commercial design decision before a single piece of equipment is specified. A consultant who does not know the applicable code cannot write a correct scope. See A.3.

◆ FLASHCARDS • REFERENCE GRID

Twelve Cards • Front and Back

Twelve flashcards covering the working concepts of Section A. Read the front, recall the back, then check. The interactive flip cards on the next page are for active practice.

1 The Create The Edge Standard

Proposal quality is the ultimate protection. Protects the client (exact scope), the firm (correct risk pricing), and the project (operational blueprint).

(A.0)

2 About Your Company

Replace this card with your company's founding story, headquarters location, and primary service lines. This is your brand anchor.

(A.1)

3 Commercial Foodservice Design

Programming, layout, specification, and coordination of professional food preparation environments. Restaurants, hotels, hospitals, universities, clubs, catering.

(A.3, A.6)

4 Commercial Laundry Design

Specification and layout of industrial-scale linen processing. Capacity calculation, utility engineering, equipment selection, processing layout. Always starts with throughput.

(A.3, A.6)

5 The Three-Day Standard

RFP receipt to completed proposal in the client's inbox in three business days. Day 1: analysis. Day 2: fee and draft. Day 3: review and delivery.

(A.7)

6 Anatomy of a Won Deal

Five stages: Lead or invitation, Discovery, Proposal construction, Review and delivery, Follow-through. Win or lose, the file is correct.

(A.4)

7 Proposal as Legal Document

A Create The Edge proposal defines what will be delivered, at what fee, under what scope. Vague proposals create disputes. Precise proposals protect everyone.

(A.5)

8 Five Phases of Foodservice Design

Programming, Schematic Design, Design Development, Construction Documentation, Construction Administration. The fee method in Section H is built around these phases.

(A.6)

9

Throughput (Laundry)

The foundational first question in laundry design: pounds of linen per day, by category. All equipment, utility, and layout decisions follow from throughput.

(A.6)

10

The Regulatory Backbone

NSF, NFPA, local health department codes, and ADA requirements. These shape every design decision before a single piece of equipment is specified.

(A.3)

11

The Elite Consultant Disciplines

Precision over speed. Proposal as legal document. Expertise in the room. Intellectual honesty: admit the knowledge gap, fill it correctly, on time.

(A.5)

12

90-Day Orientation Goal

Fluency in the method, not mastery. By Day 90: able to run a complete proposal cycle with supervisor review. Mastery follows fluency.

(A.8)

The Create The Edge Standard

Proposal quality is the ultimate protection: protects the client (exact scope), the firm (risk pricing), and the project (operational blueprint).

About Your Company

Add your company founding year, location, and primary disciplines here.

Commercial Foodservice Design

Programming, layout, specification, and coordination of professional food preparation environments. Five-phase framework.

Commercial Laundry Design

Industrial-scale linen processing. Capacity calculation, utility engineering, equipment selection. Always starts with throughput.

The Three-Day Standard

RFP receipt to client inbox in three business days. Day 1: analysis. Day 2: fee and draft. Day 3: review and delivery.

Anatomy of a Won Deal

Lead, Discovery, Proposal construction, Review and delivery, Follow-through. Win or lose, the file is correct.

Proposal as Legal Document

Defines what is delivered, at what fee, under what scope. Vague proposals create disputes. Precise proposals protect everyone.

Five Phases of Foodservice Design

Programming, Schematic Design, Design Development, Construction Documentation, Construction Administration.

Throughput (Laundry)

Pounds of linen per day, by category. The foundational first question. All equipment, utility, and layout decisions follow from it.

The Regulatory Backbone

NSF, NFPA, local health department codes, ADA requirements. Shape every design decision before equipment is specified.

Elite Consultant Disciplines

Precision over speed. Proposal as legal document. Expertise in the room. Admit knowledge gaps; fill them correctly and on time.

90-Day Goal

Fluency in the method, not mastery. Run a complete proposal cycle with supervisor review. Mastery follows fluency.
